

Progress Report 11/23
GrubSplit

1. Tasks completed since last meeting
 - a. Basic routing according to wireframes
 - b. User accounts and profile page
 - c. Create/delete grubs and subgrubs
 - d. Integration and authentication with Delivery.com API
 - e. Hardcoded restaurant search for Cafe 472
 - f. Display part of Cafe 472's menu
2. Challenges
 - a. Routing between pages with Jade
 - i. PUT, DELETE
 - ii. Passing data between pages
 - b. "Recursive" menu
 - i. Simplified menu/options for now
 - c. Designing subgrub and grub interaction
 - i. the two functionalities are extremely intertwined - was hard to figure out which should be built first
3. Changes to problem analysis, design or milestones
 - a. Altered flow of pages (in updated design doc)
 - i. Home page is now restaurant search page
 - ii. Page to start grub (restaurant details page) is distinct from subgrub ordering page
 - b. Nuances of subgrubs (editing subgrubs, deleting them, only being able to add a subgrub if you don't have one already)
 - i. Moved to not be included in MVP
 - c. Changed scope of menu
 - i. Had always planned on only allowing for Cafe 472 - now only serving a portion of the menu when actually ordering
 - ii. Full menu capabilities moved to final product
